

EFFICACY

The next time you are reviewing potential lighting recommendations for a project, remember; low wattage plus high lumen output equals a more efficient lamp.

COLOR

TEMPERATURE

Color temperature selection is very much a personal preference, however, we have found that most people prefer a light on the warmer end of the spectrum, around 3500K. 2900K tends to be too yellow for the office environment and daylight fixtures that run around 6500K tend to be way too blue. The 3500K-4100K color range provides a clean white light that allows workers to focus on tasks without being too distracting or institutional.

2000K

3500K

4100K

7500K

Task Light Options

Maia

**Desk
lamps
available
in 3500K**

Palo

**Linear lights
available
in 3500K or 4100K**
