The Ergonomics of Light

LEDs have many advantages, including low energy draw, instant on and long life. But one of the biggest advantages to office workers is that LEDs give off pure white light. This is an important distinction between LED and fluorescent lights because fluorescents give off a yellow frequency. This yellow color cannot be distinguished by the naked eye, but is instead felt through headaches and eye strain. The yellow frequency is not absorbed into white paper or work surfaces and is reflected back causing glare. This glare is a contributing factor to the estimated 68% of workers that complain about the lighting in their office. Poor lighting leads to headaches and eye fatigue and is labeled by OSHA as the leading health hazard in the workplace.

Vega™

Capella™

Vega | Capella

Capella and Vega are energy-efficient, eco-friendly LED light fixtures that deliver superior lighting for the office environment. The low profile of the lights allows the light source to be hidden from view cutting down on distracting glare. Various mounting options including, magnets, screws, or double sided tape allow for simple and quick installation on any furniture system. The Capella light features adjustable end caps that allow light to be directed exactly where needed. Both Vega and Capella are offered in 18" and 30" lengths and allow you to daisy chain up to three 18" units or two 30" units with the ability to control each fixture from a single master switch or modular occupancy sensor.

The Energy Savings of Light

Visual comfort is not the only reason for reducing ambient light levels, there are also significant savings that can be achieved by reducing the overall power usage. By specifying 40 Foot Candles (FC) versus the old standard of 100 FC, companies could save an estimated \$593.85 per 200 sq. ft. office. The money saved from reducing overhead lights could be used for individual task lighting. Employers will not only save by reducing energy costs but will also benefit from increased worker productivity. An estimated 75% of employees claim they could be more efficient with better lighting conditions. Reduced energy costs and higher employee productivity make for a better bottom line, which is the goal of every company.

Atlas™

Atlas

Atlas's low energy draw and diffused light make it the perfect energy-efficient LED solution for under-cabinet lighting. Multiple mounting options include, magnets, screws or double sided tape, and allow for installation in any workstation or office. Atlas's low profile design makes the fixture virtually undetectable when installed - perfect for the benching systems of today's workplace. Atlas lights are available in a 19" length and allow you to daisy chain up to three units with the ability to control each fixture from a single master switch or modular occupancy sensor.

Palo

The Palo linear light was engineered and designed as a direct replacement for traditional fluorescent desk lighting. Its competitive price point allows for specification on bid projects, as well as single application upgrades. High quality, color correct LEDs provide an even diffused plane of light across the work surface. Low energy draw reduces utility costs, and a rated 50,000 hour life reduces maintenance expenses from bulb replacements. The super thin profile provides a simple clean aesthetic and allows it to be virtually undetectable when installed.

Palo™

Our job is to make your job easier.

elio/ITC's commitment to listening and responding to customer needs is what sets our team apart. Top to bottom, we're known for exceeding customer expectations. From helping to develop custom solutions to making sure your products arrive on time and complete, we're always at your service!

For more information about how elio could benefit your retail facility, please contact one of our dedicated professionals at **1-888-871-8860**.
