

Our aim with **elio Light Bites** is to help you to better understand lighting, how it effects office ergonomics, how you can improve existing spaces with simple lighting recommendations, and how you can generate more **high margin** sales.

elio® Light Bites

Week 8:
Office Lighting
Considerations

[Click here to view on our website](#)

Lighting Considerations for:

- Private Office
- Open Plan
- Benching

Energy Saving Occupancy Sensors =

Include desk task light with occupancy sensor and provide ability to control overhead lighting, both of which help to control energy use, especially when out of the office.

Personal Control =

Include both under cabinet and task lighting with dimmer for personal control of light levels. The open plan with overhead storage continues to have strong sales.

Working Light =

Include adjustable task lighting that allows for light placement where needed as these workers have the least amount of control over environmental lighting.
