

Our aim with **elio Light Bites** is to help you to better understand lighting, how it effects office ergonomics, how you can improve existing spaces with simple lighting recommendations, and how you can generate more **high margin** sales.

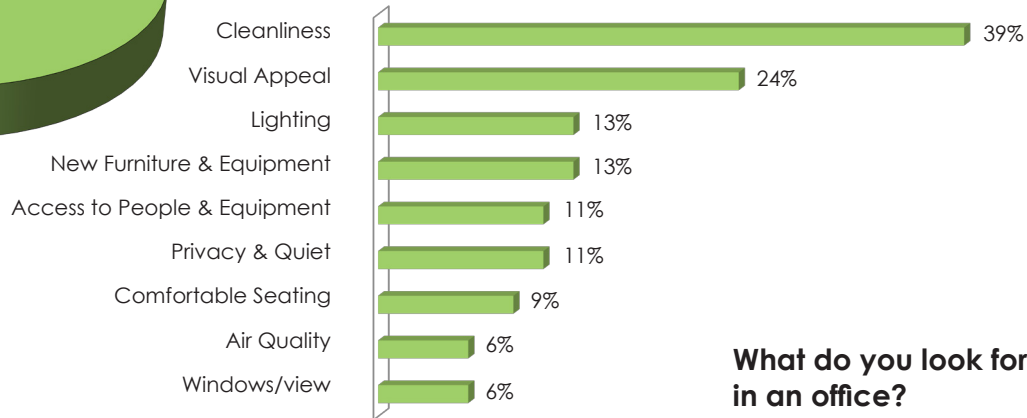

## Lighting Statistics

### Does the physical workplace influence your decision to stay in a job?

The graphs below represent a survey conducted by ASID in which they asked respondents about their work environment.

What is most worth noting is that lighting actually ranked higher than furniture and comfortable seating. So much focus is placed on ergonomic chairs, when in reality workers feel lighting will have a bigger impact on their work environment.

### What do you look for in an office?

68% of employees complain about the light in their offices.

Workers consider eye strain as the leading hazard to their health in the office.

79% of computer users would like better lighting.
