The Ergonomics of Light

It's common knowledge that proper seating and posture have a significant effect on worker comfort, but what about lighting? The ergonomics of lighting is just as important as your desk chair and many studies show that poor lighting can lead to headaches and eye fatigue. Just like the adjustments on a desk chair there is not one simple solution for poor lighting. It needs to be a combination of good design and high quality products. Lowering ambient light levels and specifying task lights is a good starting point, and considering an estimated 79% of workers desire to have more control over their workspace, task lights are a simple and affordable way to give workers the flexibility they need.

Maia™

Maia

The Maia light's sleek and contemporary design, and white or silver color options will complement any office interior. Multiple points of articulation allow for easy positioning, while full range dimming provides users with light levels from 19 FC on low, all the way up to 84 FC on high. The optional occupancy sensor helps reduce energy costs and contributes to LEED points. The flexibility and superior functionality of Maia make it the perfect solution for your task light needs.

The Energy Savings of Light

A common misconception of LEDs is that they are too expensive. While the initial purchase cost may be higher than a fluorescent light, many times they are similar pricing. Given the longer useful life, lower wattage and environmentally friendliness of LEDs, they become the more cost effective option. Significant savings cannot be achieved by simply replacing a fluorescent with an LED but needs to start with lowering the ambient light levels. By reducing the overall foot candles (FC) in the room from the old standard of 100 FC to the new recommended level of 40 FC, building owners can save an estimated \$593.85 per 200 sq. ft. office.

Orion™

Orion

Orion's lightweight and contemporary design is the perfect solution for any modern office. The multifunctional lighting controls include white, white/blue combo and blue only, allowing for unique and customizable lighting options. Energy efficient, mercury and UV free LEDs make the Orion a perfect replacement for fluorescent lighting. The energy savings, long life, and unique design of the Orion light will make your next project a success.

Rana

The classic, sophisticated design of the Rana light makes it the perfect solution for private offices and workstations alike. The pivoting head provides custom positioning for perfect illumination levels. Energy efficient and environmentally friendly, the Rana uses only 5.6 watts on the high setting. With full range dimming, brushed nickel finish, and the most advanced LEDs available, the Rana takes task lighting to the next level.

Rana™

Our job is to make your job easier.

elio/ITC's commitment to listening and responding to customer needs is what sets our team apart. Top to bottom, we're known for exceeding customer expectations. From helping to develop custom solutions to making sure your products arrive on time and complete, we're always at your service!
