Elio™ LED Lighting Adds UL Listing to Current ETL Listing

Elio™ recently received the UL Listing from Underwriters Laboratory recognizing the high safety and quality produced in elio's™ linear lighting products. Working to improve safety standards in living and working environments, UL promotes engineering quality through certifications to products that meet that objective. By means of superior innovation and high engineering standards, elio™ LED linear lighting is proud to provide its customers the recently added UL Listing to its line of LED energy efficient lighting products.

The investment made by ITC Incorporated's elio™ LED lighting division to register its linear products with an additional listing to its current ETL listing, provides customers not only confidence in the quality of our products, but in their safety as well. Used in retail display lighting, office applications, task lighting, and display case manufacturing, linear lighting provides an efficient lighting option. High quality color rendering, a quick return on investment, and lower energy bills also push elio™ lighting to the front of lighting options for our customers in addition to its multiple safety & quality listings.

For more information regarding how UL listings are obtained and their components, please visit <http://www.ul.com> for more information. To obtain a quote of a lighting project for your next project, visit our [Contact](#) page on our website to get in touch with one of our dedicated professionals.
